Application No.  Office Action Summary  Examiner Emity J. Feick 2862  The MAILING DATE of this communication appears on the cover sheet with the correspondence address  Period for Reply  A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM  THE MAILING DATE OF THIS COMMUNICATION.  Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely flied after SIX (6) MONTHS from the malling date of this communication.  If the period for reply is specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.  If NO peniod for reply is specified above it less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.  If NO peniod for reply is specified above it less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.  If NO peniod for reply is specified above it he maximum statutory period will apply and will expire SIX (6) MONTHS from the malling date of this communication.  Failure to reply within the set or extended peniod for reply will be statutory period will apply and will expire SIX (6) MONTHS from the malling date of this communication, even if timely filed, may reduce any samed patent term adjustment. See 37 CFR 1.704(b).  Status  1) Responsive to communication(s) filed on	KIC						
Examiner Emily J. Feick  2862  The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply  A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the malling date of this communication. If the period for reply specified above, the maximum statutory period will apply and will explicitly specified provise is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. If NO period for reply is specified above, the maximum statutory period will apply and will explice ISX (6) MONTHS from the mailing date of this communication. Failure to reply within the set or extended period for reply will, by statue, cause the application to Secone ABANDONED (35 U S.C § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).  Status  1) Responsive to communication(s) filed on  2a) This action is FINAL. 2b) This action is non-final.  3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.  Disposition of Claims  4) Claim(s) 1-28 is/are pending in the application.  4a) Of the above claim(s) is/are withdrawn from consideration.  5) Claim(s) is/are allowed.  6) Claim(s) is/are objected to.  8) Claim(s) is/are objected to.  8) Claim(s) are subject to restriction and/or election requirement.							
Emily J. Feick  - The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply  A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.  Extensions of time may be available under the provisions of 37 CFR 1.139(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.  If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).  Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).  Status  1) Responsive to communication(s) filed on  2a) This action is FINAL. 2b) This action is non-final.  3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.  Disposition of Claims  4) Claim(s) is/are pending in the application.  4a) Of the above claim(s) is/are withdrawn from consideration.  5) Claim(s) is/are rejected.  7) Claim(s) is/are objected to.  8) Claim(s) is/are objected to.							
The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply  A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.  Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after StX (6) MONTHS from the mailing date of this communication.  If the period for reply specified above, the maximum statutory period will apply and will expire StX (6) MONTHS from the mailing date of this communication.  Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).  Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).  Status  1) Responsive to communication(s) filed on  2a) This action is FINAL.  2b) This action is non-final.  3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.  Disposition of Claims  4) Claim(s) 1-28 is/are pending in the application.  4a) Of the above claim(s) is/are withdrawn from consideration.  5) Claim(s) is/are allowed.  6) Claim(s) is/are objected to.  8) Claim(s) is/are objected to.							
Period for Reply  A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If the period for reply specified above is less than thirly (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.  - If No period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).  - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). ### **DETAILED ACTION**

# **Drawings**

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference sign(s) not mentioned in the description: Figures 3 and 6 contain the reference character "z" but are not explained in the description. Correction is required.

## Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-9, 17, 25, and 27 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As to claim 1, reference is made to a method for measuring the attributes of materials containing a fluid state. It is unclear what type of measuring made, what type of attributes are being measured, what type of materials the measurement is being performed on. Since claims 2-9 are dependent on the rejected claim they are rejected as well.

As to claims 8, 17, 25, and 27, reference is made to  $\phi$  (T<sub>2</sub>) which is defined in the claims as the porosity corresponding to the exponential decay time T<sub>2</sub>. However since there are several types of porosity it is unclear which type of porosity the applicant is referring to.

Claim Rejections - 35 USC § 102

Art Unit: 2862

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 2, 4-11, 13-19, 21-28 are rejected under 35 U.S.C. 102(b) as being unpatentable by U.S. Patent No. 6,005,389 to Prammer.

As to claim 1, Prammer discloses a method for measuring an indication of attributes of materials containing a fluid state comprising the steps of: providing a time-domain signal indicative of attributes of said materials in a signal measurement (col.3, lines32-36; Figure 8A; Figure 9B); constructing a time-domain averaged data train (col.4, lines 3-6; col.4, lines18-21), the averaging being performed over one or more time intervals  $\Delta_i$  (Figure 2, Figure 5, col.8, lines 12-18); computing an indication of the attributes of said materials from the time domain averaged data train (col. 4, lines 18-21).

In reference to claim 2, Prammer discloses the method of claim 1 wherein said one or more time intervals  $\Delta_i$  are constant (col. 8, lines 12-18).

As to claim 4, Prammer discloses a method as in claim 2 wherein the following expression is used to construct the time-domain averaged data train:  $S_{\Delta}(t) = \int_{t}^{t+\Delta} dt' S(t')/\Delta$  (col. 11, equation 5).

As to claim 5, Prammer teaches the method of claim 1 wherein the time interval  $\Delta_i$  is fixed and the time-domain averaged data train is constructed at times  $t = t_0$ ,  $t_0 + \Delta$ ,  $t_0 + 2\Delta$ ,...,  $t_0 + \Delta$  (col. 8, lines 12-18).

In reference to claim 6, Prammer teaches the method of claim 1, wherein the time-domain signal is an NMR echo train (Figure 8A, Figure 9B).

Art Unit: 2862

In reference to claim 7, Prammer discloses the method of claim 6 wherein the step of computing an indication of attributes is performed using inversion of the constructed time-domain averaged data train into  $T_2$  domain (col. 9, lines 25-40).

As to claim 8, Prammer discloses the method of claim 7, wherein the  $T_2$  distribution is estimated using the following expression:  $S_{\Delta}(t) = \Sigma_{T2} \phi(T_2) \exp(-t/T_2)(1-\exp(-\Delta/T_2)) + \text{Noise}$  (col. 10, equation 3).

In reference to claim 9, Prammer discloses the method of claim 1 further comprising the step of averaging two or more constructed time-domain averaged data trains to increase the signal-to-noise ratio of the measurement (col. 5, lines38-42; col. 11, lines 24-32).

As to claim 10, Prammer discloses a method for measuring an indication of attributes of materials containing a fluid state comprising the steps of: providing an NMR echo-train indicative of attributes of materials along the borehole (col.3, lines32-36; Figure 8A; Figure 9B); constructing a time-domain averaged data train (col.4, lines 3-6; col.4, lines18-21), the averaging being performed over one or more time intervals  $\Delta_i$  (Figure 2, Figure 5, col.8, lines 12-18); computing an indication of the attributes of said materials from the time domain averaged data train (col. 4, lines 18-21).

In reference to claim 11, Prammer discloses the method of claim 10 wherein said one or more time intervals  $\Delta_i$  are constant (col. 8, lines 12-18).

In reference to claim 13, Prammer discloses the method of claim 10 further comprising the step of averaging two or more constructed time-domain averaged data trains to increase the signal to noise ratio of the measurement (col. 5, lines38-42; col. 11, lines 24-32).

Art Unit: 2862

As to claim 14, Prammer teaches the method of claim 10 wherein the following expression is used to construct the time-averaged data train:  $Echo_{\Delta}(t)=\int_{t}^{t+\Delta}dt'Echo(t')/\Delta$  (col.11, equation 4).

As to claim 15, Prammer teaches the method of claim 10 wherein the time interval  $\Delta_i$  is constant and the time-domain averaged data train is constructed at times  $t = t_0$ ,  $t_0 + \Delta$ ,  $t_0 + 2\Delta$ ,...,  $t_0 + N\Delta$  (col. 8, lines 12-18).

In reference to claim 16, Prammer discloses the method of claim 15, wherein the step of computing an indication of attributes is performed using inversion of the constructed timedomain averaged data train into T<sub>2</sub> domain (col. 9, lines 25-40).

As to claim 17, Prammer teaches the method of claim 16 wherein the  $T_2$  distribution is estimated using the following expression  $Echo_{\Delta}(t) = \Sigma_{T2} \varnothing (T_2) \exp(-t/T_2)(1-\exp(-\Delta/T_2)) + Noise$  (col.10, equation 3).

As to claim 18, Prammer discloses a method for increasing the spatial resolution of NMR logging measurements, comprising the steps of: providing an NMR echo-train indicative of attributes of materials of interest (col.3, lines32-36; Figure 8A; Figure 9B); and constructing time-domain averaged data train from said echo train (col.4, lines 3-6; col.4, lines18-21), the averaging being performed over one or more time intervals  $\Delta_i$  (Figure 2, Figure 5, col.8, lines 12-18).

In reference to claim 19, Prammer teaches the method of claim 18 wherein at least two or more time intervals are constant (col. 8, lines 12-18).

Art Unit: 2862

In reference to claim 21, Prammer teaches the method of claim 18 further comprising the step of averaging two or more constructed time-domain averaged data trains to increase the signal-to-noise ratio of the measurement (col. 5, lines38-42; col. 11, lines 24-32).

As to claim 22, Prammer teaches the method of claim 18 wherein the following expression is used to construct the time-averaged data train:  $Echo_{\Delta}(t)=\int_{t}^{t+\Delta}dt'Echo(t')/\Delta$  (col.11, equation 4).

As to claim 23, Prammer teaches the method of claim 18 wherein the time interval  $\Delta_i$  is constant and the time-domain averaged data train is constructed at times  $t = t_0$ ,  $t_0 + \Delta$ ,  $t_0 + 2\Delta$ ,...,  $t_0 + N\Delta$  (col. 8, lines 12-18).

In reference to claim 24, Prammer discloses the method of claim 23 wherein the step of computing an indication of attributes is performed using inversion of the constructed time-domain averaged data train into  $T_2$  domain (col. 9, lines 25-40).

As to claim 25, Prammer teaches the method of claim 24 wherein the  $T_2$  distribution is estimated using the following expression  $Echo_{\Delta}(t) = \Sigma_{T2} \, \emptyset \, (T_2) \, \exp(-t/T_2)(1-\exp(-\Delta/T_2)) + Noise (col.10, equation 3).$ 

As to claim 26, Prammer discloses a method for real-time processing of NMR logging signals comprising the steps of: providing real time data corresponding to a single event NMR echo train indicative of physical properties of materials of interest; constructing a time domain averaged data train from said NMR echo train, the averaging being performed over time interval  $\Delta$  using the expression  $S_{\Delta}(t)=\int_t^{t+\Delta}dt'S(t')/\Delta$  (col. 11, equation 5), and the time-averaged data train is constructed at times  $t=t_0$ ,  $t_0+\Delta$ ,  $t_0+2\Delta$ ,...,  $t_0+N\Delta$  (col. 8, lines 12-18).

Art Unit: 2862

In reference to claim 27, Prammer discloses the method of claim 26, further comprising the step of inverting of the constructed time-domain averaged data train into the  $T_2$  domain (col. 9, lines 25-40) wherein the  $T_2$  distribution is modeled using the expression  $Echo_{\Delta}(t) = \Sigma_{T2} \varnothing (T_2)$   $exp(-t/T_2)(1-exp(-\Delta/T_2))$  +Noise (col. 10, equation 3).

In reference to claim 28, Prammer teaches the method of claim 26, further comprising the step of averaging two or more constructed time-domain averaged data trains to increase the signal-to-noise ratio of the measurement (col. 5, lines38-42; col. 11, lines 24-32).

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 3, 12 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Prammer in view of U.S. Patent No. 6,163,153 to Reiderman et al.

In reference to claim 3, Prammer teaches the method of claim 1 but does not teach that at least two of said one or more time intervals  $\Delta_i$  are different. However, Reiderman does teach that varying the duration of the time intervals. Reiderman discloses that doing so would be beneficial since one is still able to produce a maximum signal-to-noise ratio while minimizing the use of electrical power by the instrument (col. 7, lines 54-58). Therefore, it would have been obvious at the time of the invention to one of ordinary skill in the art to vary the time intervals in order to

Art Unit: 2862

minimize the power consumption of the device while maintaining a maximum signal-to noise ratio.

In reference to claim 12, Prammer teaches the method of claim 10 but does not teach that at least two of said one or more time intervals  $\Delta_i$  are different. However, Reiderman does teach that varying the duration of the time intervals. Reiderman discloses that doing so would be beneficial since one is still able to produce a maximum signal-to-noise ratio while minimizing the use of electrical power by the instrument (col. 7, lines 54-58). Therefore, it would have been obvious at the time of the invention to one of ordinary skill in the art to vary the time intervals in order to minimize the power consumption of the device.

In reference to claim 20, Prammer teaches the method of claim 18 but does not teach that at least two of said one or more time intervals  $\Delta_i$  are different. However, Reiderman does teach that varying the duration of the time intervals and therefore minimizes the use of electrical power of the device (col. 7, lines 54-58). As discussed previously, it would have been obvious at the time of the invention to one of ordinary skill in the art to vary the time intervals in order to still produce a maximum signal-to-noise ratio while minimizing the use of electrical power by the instrument.

#### Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent No. 5,517,115 to Prammer discusses processing NMR echo trains.

Art Unit: 2862
